Endelige løsning

Reduceret team kapacitet

1

Udfordring

- Hvornår personen ville vende tilbage
- Usikkerhed omkring team kapacitet og workload
- Ikke én korrekt løsning
- Arbejde eksperimenterende frem for at følge en fast procedure.

2

Håndtering

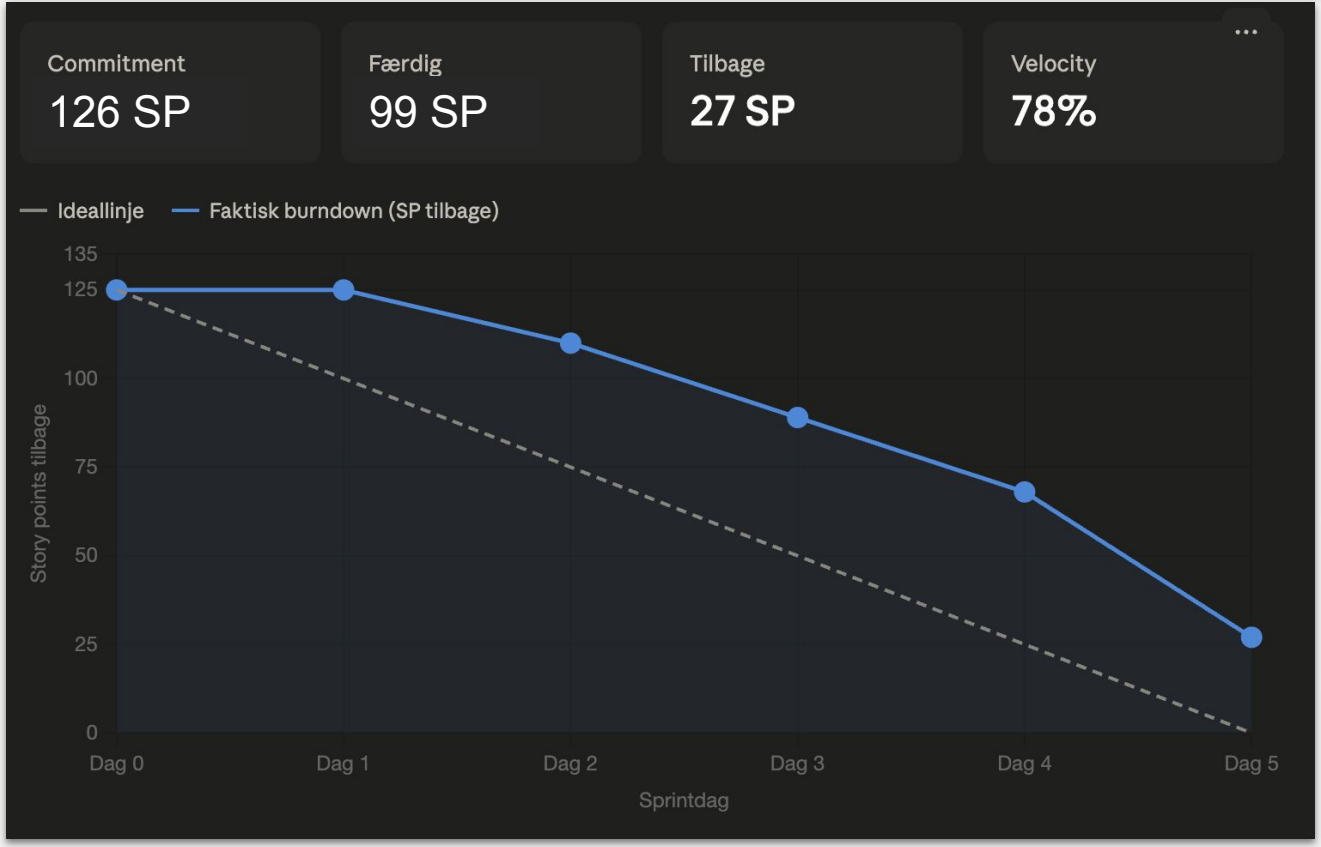

- Complex
- Unknown unknowns
- Probe-sense-respond
- Planen

3

Resultat

- Forståelse
- Struktureret metode

Overestimering af sprintkapacitet

Product backlog
252 SP

Hastemøde
PO - Kunde

Re-prioritering

Kundeværdi

2 user stories

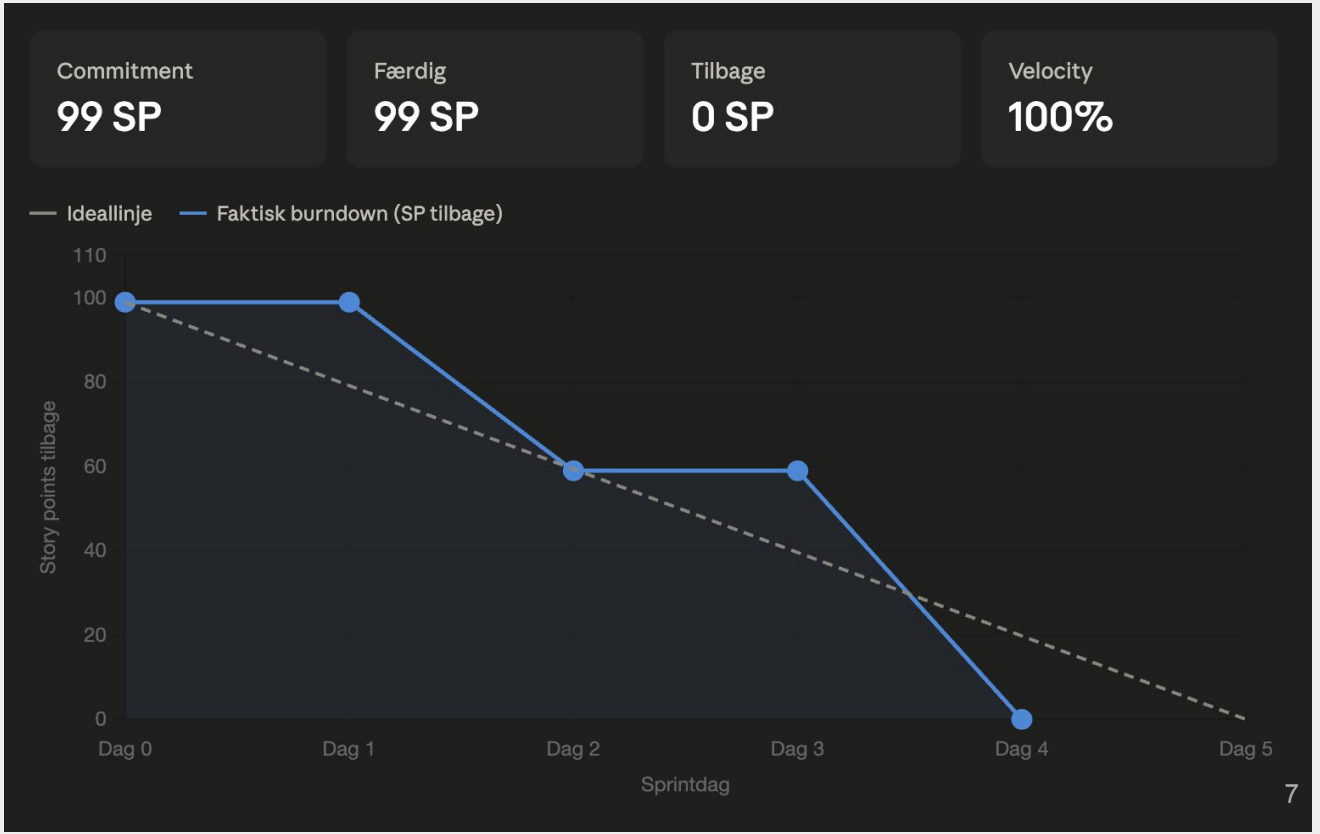

Underestimeret kapacitet i sprint planning

Afsluttet før tid

Velocity

Begrundelse
Analyse, Forståelse, Implements

Kapacitet
110 - 115 SP

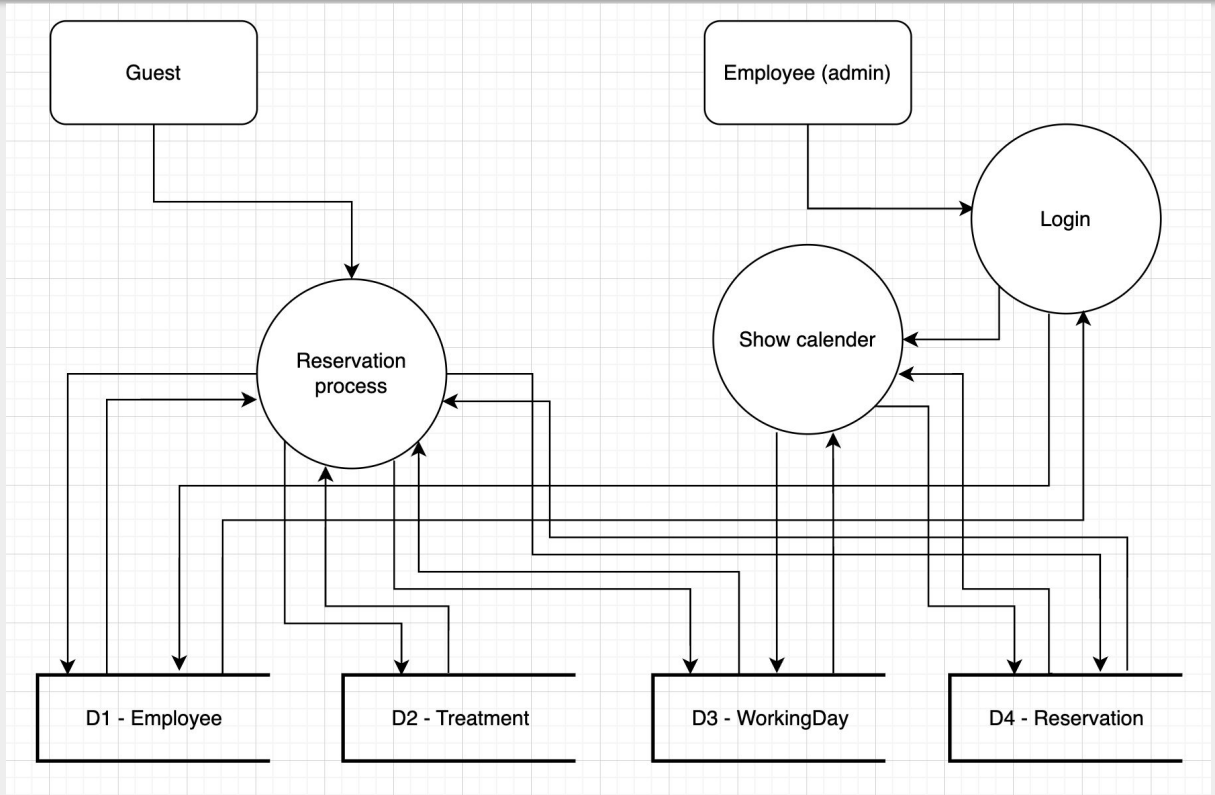

Konklusion

1. Betydning for backlog
2. Metrikker og empirisk data
3. Diagrammering og visuel data

Appendix

- Dataflow diagram
- Code coverage
- Class diagram
- Package diagram
- Domain Model
- Deployment Diagram
- Use Case diagram
- ER diagram
- Acceptance tests
- Cyclomatic Complexity
- Robustness diagram (login)
- Robustness diagram (book reservation client)

Robustness diagram book reservation (client)

Book reservation (Client)

Main Course:

Client navigates to home page. The system shows the guest the options of treatment. The client choses the desired treatment. The system finds the available time slots in the database and shows the available time slots for the specified treatment. The user selects a time slot. The system prompts the user to choose between selecting multiple or a singular timeslot.
The user can choose multiple treatments

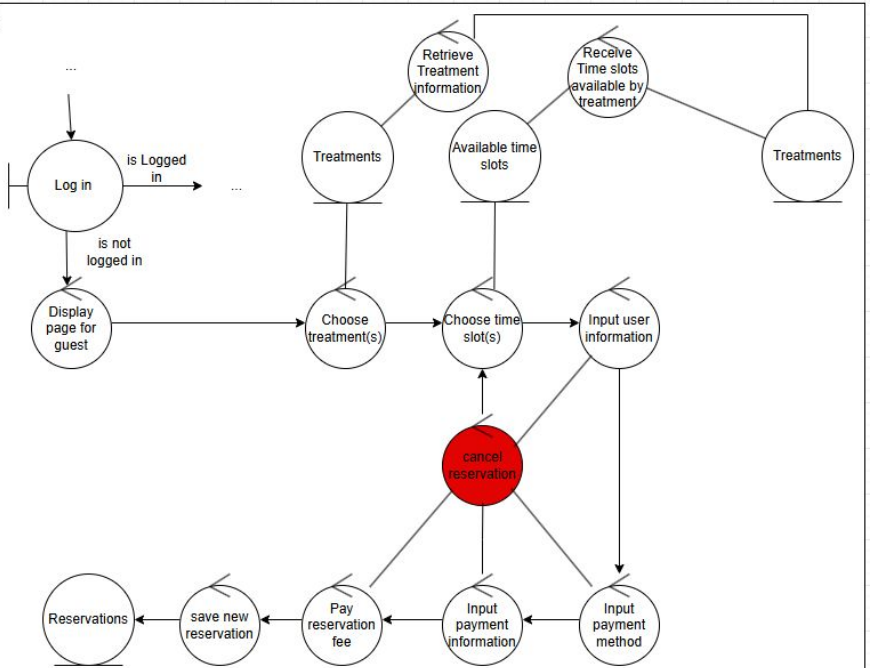

(process done -> transaction)

System prompts user for information.
User inputs information and presses next
System prompts user for payment method
User inputs payment method.
System prompts for payment information and asks the user to pay minimum reservation payment

Alternate Courses:

User cancels transaction in payment method.

The system cancels all previous steps in transactional method
System moves user back to reservation slot selection with selected tiles still selected.
